Specializing in Instrumentation and Oilfield Equipment

Standpipe Pressure Gauges

Features

- The standpipe gauge is used in applications where high levels of pulsation and vibration are occurring.
- These gauges provide accurate pressure readings with quick response to pressure changes.
- Built-in dampening to minimize gauge fluctuations.
- Liquid filled gauge minimizes vibration and wear to gauge movement.

How To Order

- Pressure Capacity
- Scale of Dial (psi, kPa, MPa or other)
- Type of Connection (2" NPT, Hammer Union or Flange)
- Standard or H2S Service
