*Specializing in Instrumentation and Oilfield Equipment*

## Versa Valves

### Features

- Versa valves are designed for pneumatic and low pressure hydraulic directional control.
- They are available with solenoid, manual and pilot actuators.
- They also have available unique features such as lockout, latching manual reset and redundant coils.
- Versa's valve construction allows the valve bodies and actuating devices to be interchanged end for end and valve for valve.
- Units are designed for control of pneumatic pressures from partial vacuum to 200 psi and hydraulic pressure up to 100 psi.
- Available in two-way, three-way, four way, multipurpose, 2/2, 3/2, 3/3, 5/2 or 5/3.
- Port sizes from 1/8" to 1-1/4" NPT and either side ported or manual mounted.
- Actuation in solenoid pilot, remote pilot, manual or mechanical.

### How To Order

- Type of Application
- Maximum Pressure
- Function
- Port Size
- Style
- Actuation
