Specializing in Instrumentation and Oilfield Equipment

Bail Link Set

Features

- Bail links are assembled from a single piece of high-grade alloy steel to provide optimum tensile strength. More weight and "plus-diameter" in vital spots make these linkages even stronger. The short upper eye shape allows for greater balance and simpler elevator control while also decreasing wear on the eye portion against the swivel bail or body.
- They connect to existing standard links, removing the need to remove them before installing extra-long links. As a result, downtime is reduced, and there is no need for another set of extra-long elevator linkages.

How To Order

- Length
- Capacity (Ton)
- Big eye or small eye

** Optional

- Link extension length (72", 96", 120", or 144")
